Abstract of JP2001176189

PROBLEM TO BE SOLVED: To

prevent an unfair copy.

SOLUTION: This device is an optical disk

recording/reproducing device

recording and/or reproducing

information on an

attachable/detachable optical

disk 7, and though a

recording/reproducing circuit 3

reads out disk manufacture

identification information Disk 1dr

being first identification

information and disk record

identification information Disk

1dm being second identification

information from the optical disk

7, when the disk record

identification information Disk 1dr

is not recorded on the optical

disk 7, and the disk record

identification information Disk ldr is not obtained, a control circuit 2 controls so as to write a random number generated in a random number generation circuit 10 on the optical disk 7 as the disk record identification information Disk ldr.
